## Habitat Survey Toolbox

**Our survey application allows you to simplify and improve the capacity of territory management and spatial planning.**

**The application consists of:**

- ❖ An Android app that collects survey data by filling pre determined forms.
- ❖ A website that manages all the data within the forms.
- ❖ A server that manages and collects all the information provided by the app.

**This application can be used for:**

- Public policies evaluation and analysis
- Spatial Planning and land management
- Urban and Rural development
- Municipal management: local public services

Our main goal with this app, is to offer a well-organized and suitable data collector device, in order to resolve the difficulties -faced by different types of institutions- associated to the over-use of paper for documentation purposes and its consequent problems for organizing and linking the information obtained.

## **We look forward to building business networks with**

- Public management at different levels
- Public and Private Institutions
- Research Centers
- Consultants
- Political Advisor

## **Technical Proposal**

- Graphic customization
- Specially dedicated server
- Customized Android Application available in Google Play
- SSD discs and Gigabit Connectivity
- Back up policies
- Senior Systems Administrator (Engineering PHD level)

## **Free Trial**

We offer a complete free trial of the app survey, which includes the personalized design of the required data form; and full-day access to the web server for visualization and setup of the data obtained.

## **Payment Method**

500 U\$S for a monthly subscription

15 day - implementation period
